

Tsunami Warning and Advisory (Japan Meteorological Agency)

When a strike of disaster by tsunami is expected, tsunami (major tsunami) warning or tsunami advisory is given within about 3 minutes (fastest within 2 minutes on *a part of earthquakes) after the earthquake occurs.

Category		Indication	Forecast tsunami height
Tsunami Warning	Major tsunami	Tsunami height is expected to be 3 meters or more. Take strict precautions.	3m, 4m, 6m, 8m, more than 10 m
	Tsunami	Tsunami height is expected to be up to 2 meters. Take necessary precautions.	1m, 2m
Tsunami Advisory		Tsunami height is expected to be about 0.5 meters at the highest. Be careful.	0.5 m

*the earthquake that occurs nearby Japan and its accurate location and magnitude can be measured immediately by the technique of the emergency earthquake alert
